Activity Report

In this 2 month after the train the trainer the things we are

first, focusing in getting better at radio's skills and knowledges because we are trainers so we need be good

second, month ago we done a meeting with ARAT president and membres we present our rapport of yota and from that day we started preparing for the joti jota it will be an event with many activites like foxhunting,robotic, constraction workshop...etc and this weekend u will be see the result

In the future we will prepare and event like radio day it will be a public event for normale people and we will be more focused on recruitment of universty student so when they became trainer they can help us a lot because we dont have many trainer in tunisia.

The problem for now are the equipment we don't have it in tunisia so we need to get it from outside but there is many problem to get it inside.

JOTA-JOTI

In this two months of the train the trainer program we tried to focus on different events to be in touch with youth.

JOTI-JOTA 2018

This year's program was distinguished by its richness, abundance, and its diversity compared to previous years, and its integration to a certain extent, and was divided along the three mentioned days:

The first day program consisted of receiving participants, delivering words by the organisers, introducing the attendees to the program, and exposing them to the world of ham radio through a general and comprehensive workshop.

During the second day, the activities mainly consisted of the following:

- Workshop on how to use the radio, procedures for communication.
- Workshop to learn about the world of Electromagnetic waves and antennas.
- Workshop to identify the world of digital communication, its importance in the world of amateur radio, and the methods adopted.
- Workshop to learn about the world of electronic programming with application example using Arduino.
- Workshop to identify the world of robotics and mechanisms using Arduino.
- Workshop to make a crystal receiver.
- ARDF Workshop

The day ended with a classic activity for this event, called the Great Game. This game is design to mainly test what the participants have learnt from the various workshops. It consisted of dividing them into several teams, who's tasks are making an antenna and then finding a station with scattered components, then install it, and then operate on it, in order to experiment with the antennas made and at least obtain a correct call sign. All teams were able to pass through all stages one of which managed to make a successful QSO. The game was followed by a ceremonial atmosphere of a Tunisian scout tradition, which is known as "Camp fire".
